SinoBiological Membrane Protein: sconto 50%

Membrane proteins are increasingly recognized as having a vital role in drug discovery as their interaction with the substance helps determine the efficacy. They are involved in a variety of cellular processes and are implicated in a multitude of human diseases, including cancer, metabolic and autoimmune diseases, as well as neurodegenerative diseases. Over 60% of FDA-approved drugs target membrane proteins, a substantial component of the human proteome. They encompass diverse categories such as ion channels, transporters, G protein-coupled receptor (GPCR), and other types of receptors.

With numerous drug candidates in preclinical and clinical phases, the development of innovative drugs targeting membrane proteins remains a research hotspot in the pharmaceutical field
